

Title :Zomato Customer Support Gap Analysis

Pravalika Medharamitla| PM Portfolio Project | May 2026

● Executive Summary

This report analyses 50 negative user reviews of Zomato collected from the Google Play Store. Reviews were categorised by problem type and prioritised using the RICE framework. The top finding is that 58% of complaints relate to Order & Delivery and Payment & Refund issues.

● Methodology

50 user reviews were collected and analysed to identify recurring complaint patterns in Zomato's customer support experience. Each review was manually read and assigned a problem category — Order & Delivery, Payment & Refund, App Performance, Poor Support, or Wrong / Missing Items. severity rating of High, Medium, or Low was applied to each review based on the intensity of the complaint. Category counts were calculated to identify the most frequent issues. The top 3 problems were then scored using the RICE framework — Reach, Impact, Confidence, and Effort — to prioritise recommendations by business value.

● Tools Used

- Google Sheets — data organisation, categorisation, COUNTIF analysis, bar chart creation, and RICE scoring
- Google Docs — report writing and documentation

● Key Findings

Order & Delivery is the most common complaint at 40% of all reviews. Payment & Refund issues follow at 18%. Together these two categories account for 58% of all negative feedback.

Zomato Review Issues by Category (n=50)

RICE Prioritisation

The top 3 issues were scored using the RICE framework to determine which should be fixed first based on business value.

Problem	Reach	Impact	Confidence	Effort	RICE Score
Order & Delivery	9	9	9	5	145.8
Payment & Refund	8	10	9	4	180
Poor Support	7	8	8	6	74.7

Recommendations

1. Automated Refund Engine (RICE: 180 — Highest Priority)

Problem: Users who pay for cancelled orders wait 7–10 days for refunds with no updates, leading to high frustration and loss of trust.

Solution: Build a rule-based automated refund system that triggers instantly when an order is cancelled by the restaurant or delivery partner. Refunds should reflect within 24 hours.

Expected Outcome: Refund complaints drop by 60%. User trust improves.

2 . Proactive Delay Notifications (RICE: 145.8)

Problem: Users have no visibility when their delivery is running late. They only find out after waiting well beyond the estimated time.

Solution: Send automatic push notifications when delivery crosses the estimated time, with a revised ETA and a small discount coupon for delays over 20 minutes.

Expected Outcome: Delivery-related complaints drop by 40%.

3. In-App Live Chat (RICE: 74.7)

Problem: Current support is bot-only. Users with serious issues like missing orders or payment failures cannot reach a human agent quickly.

Solution: Introduce in-app live chat available during active orders. Route high-severity cases like payment failures directly to human agents.

Expected Outcome: First contact resolution improves from 30% to 65%.

● Conclusion

Zomato's negative reviews are concentrated in two fixable categories. Addressing refund automation and delivery communication would resolve the majority of user frustration and improve retention.
